DETAILED ACTION

Response to Amendment

1. Applicant's amendment filed on October 19, 2007 has been entered. Claims 1, 8 and 15 have been amended. Claims 2-7, 9-14 and 16 have been cancelled. Claims 17-24 have been added. Claims 1, 8, 15 and 17-24 are still pending in this application, with claims 1, 18 and 21 being independent.

Allowable Subject Matter

2. Claims 1, 8, 15 and 17-24 are allowed.

3. The following is an examiner's statement of reasons for allowance:

Applicant teaches a first embodiment including an illumination device including a plurality of spherical photoelectric conversion elements, a lens member for guiding of concentrating light to the conversion elements, a condenser for accumulating power from the conversion elements, a plurality of light sources powered by the conversion elements, a light sensor for controlling illumination of the light sources, and a sealing member integrating the illumination device into a single unit. A control circuit is also included for energizing either of the plurality of light sources based on the amplified output of the light sensor.

A second embodiment includes a plurality of spherical photoelectric conversion elements, a semi-spherical lens member, a partial-spherical metallic reflection members disposed below the conversion elements, a luminous device, and a synthetic resin

member encapsulating the converting elements, the luminous device and the reflection members. The converting elements include a spherical crystal of p-type or n-type semiconductor material, a pn junction formed by a diffusion layer adjacent the surface of the crystal, a spherical light receiving surface, and first and second electrodes disposed diametrically opposite one another on bottom and top sides of the crystal. The converting elements are connected in series with the last converting element being connected to the reflection member.

4. No prior art was found teaching individually, or suggesting in combination, all of the features of the applicants' invention, specifically a control circuit for energizing either of a plurality of light sources based on the amplified output of a light sensor, or the specific arrangement of the converting elements, in combination with the recited structural limitations of the claimed illumination device.

5. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
